General Description

The SA9137 USB audio controller is designed to provide audio input and output capabilities for USB-connected devices. It supports various audio formats and features such as stereo audio playback, microphone input, volume control, and audio processing algorithms.

Application

USB Headsets: The SA9137 can be used in USB headsets to enable high-quality audio playback and microphone input for communication and multimedia purposes.

USB Speakers: It can be integrated into USB speaker systems to provide audio playback capabilities and enhance the sound quality.

USB Audio Adapters: It can be used in USB audio adapters, allowing users to connect traditional analog audio devices to their computers or other USB-enabled devices.

USB Audio Interfaces: It can be utilized in USB audio interfaces for professional audio recording and production, offering multiple inputs and outputs for connecting various audio sources and devices.

USB Sound Cards: It can be employed in USB sound cards to enhance the audio performance of laptops, desktop computers, and other devices that lack dedicated audio interfaces.
