General Description

EPM7064LC68-7 is a type of field-programmable gate array (FPGA) manufactured by Intel (previously Altera).

Key Features

The EPM7064LC68-7 has 64 macrocells, which are the basic building blocks of an FPGA.

It operates on a 3.3-volt power supply.

It has 68 pins in a low-cost plastic package (PLCC).

Application

The EPM7064LC68-7 can be used in a wide range of applications, including industrial automation, consumer electronics, telecommunications, and automotive applications.

It is commonly used in embedded systems as a glue logic device to interface between different components and to provide custom logic functions.
